Lawrence Berkeley National Laboratory

LBL Instrumentation Meeting  
March 27, 2020

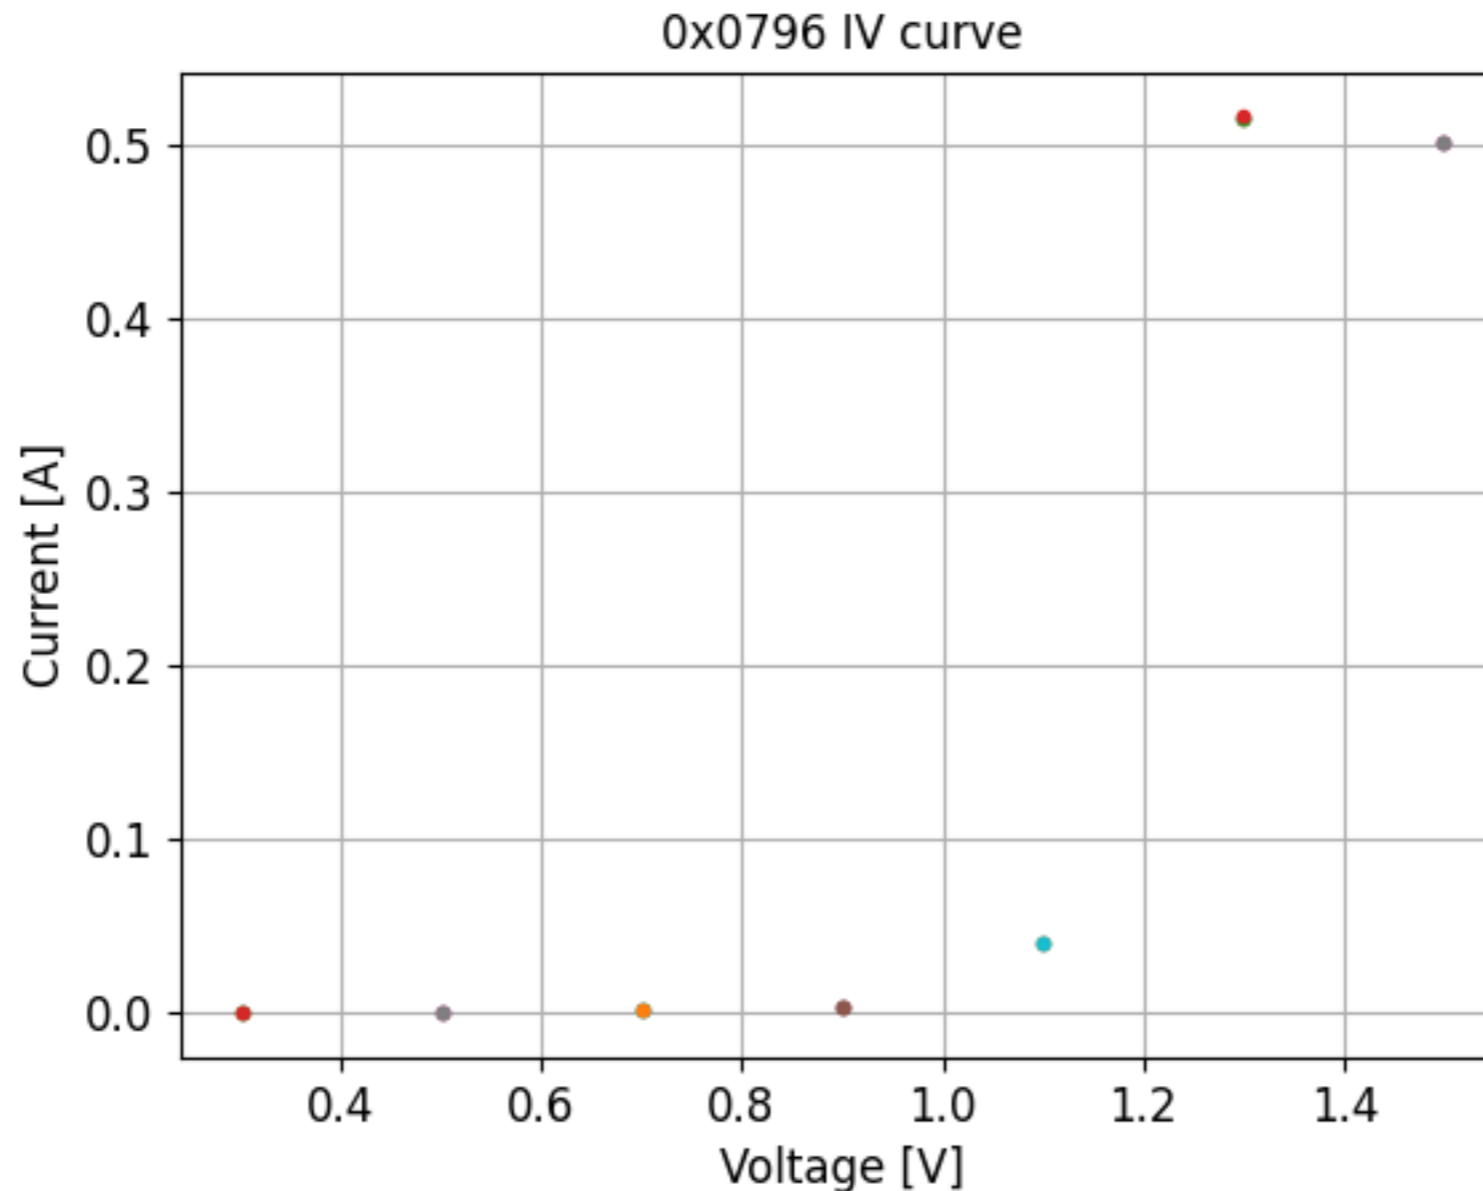

# Introduction

---

- While we're all working from home, starting to develop [Pixel module QC](#) and [scripts](#)
  - One item is sensor IV curve using HV power supply (Keithley 2410)
- Simone + Karol + Elisabetta have been doing a ton of LabRemote development
  - Common PS class so all PS controlled using same commands with json configuration
  - [Documentation](#)
- Modified LV IV curve used for SLDO turn-on using the updated LabRemote code

# Test IV curve

- Proof of concept: scripts are working, can control Keithley
- When we can access the lab, need to set this up with probe station
- Next steps:
  - Continue with additional QC tasks
