

# Module QC tools: Analog Read Back, meter communication

- Analog Read Back:
  - Measure and record the readings from all Vmux and Imux channels.
  - Added schema checker and CI test.

- Meter Communication:
  - Some multimeters give communication timeout error.
  - Add a while loop in the `send_command_and_read()` function in `hardware_control_base.py` to allow n tries in case of timeout error.
