SCET and Fermi Liquid Theory

Tuesday, 28 March 2023 16:00 (35 minutes)

In this pedagogical talk I will try to show how these two rather distinct physical systems are more similar than one would have expected, once looked upon through the lens of effective field theory. While the observables are wildly different, the kinematics which define the “ground state” (super-selection sectors) can be considered to be in the same class.
